Contractor:

System 4000, black plastic ADA grates
Globe Asphalt Paving Co., Indianapolis, IN

During the refurbishment of the school's athletic facilities, the drainage for the track was to be replaced. This would ensure that the track had it's own drainage system and would prevent any rainwater from flooding the surrounding area.

ACO Sport System 4000 was selected for the drainage in this project because of it's neat, linear finish that followed the tracks profile and did not distract from the

aesthetics of the project.

In addition, the black plastic ADA compliant grates create a safe transition for athletes traveling from the running track to the synthetic turf playing field.

The Sport 4000 and black plastic grates were used for drainage.
